

## Product Brief: 8.4" Horizon Hxr Touch

### GRT Safe-Touch

GRT Safe-touch provides touchscreen interaction without the risk of inadvertent activation. We use the intuitive and simplicity of the touchscreen, secured with softkey presses. Want to rubber band your flight plan? Just touch it. Your flight plan will not change until you confirm the action with a softkey press. Simple and secure, even in turbulence, and always backed up with the full softkey interface you have come to rely on under any conditions.

Flight plan entry no longer requires looking up identifiers. The flight plan can be edited, frequencies, weather, runways, and more can be recalled, and more, without fear of inadvertent actions. All non-touch control has been retained.

Shipping mid-August, 2016.

The flight plan has been edited, displaying the softkey options that will update the flight plan, or cancel the edit. This prevents unintended actions when using the touchscreen in turbulence.
